

THE PROCESS OF GOING SOLAR

THE BLUE RAVEN SOLAR WAY

ESTIMATE SOLAR SAVINGS

Work with a Blue Raven Solar representative who will walk you through the solar installation process and estimate your savings.

SCHEDULE CONSULTATION

A Blue Raven Solar representative will come to your home to give you an estimate and provide you with a custom proposal.

CUSTOM PROPOSAL

A custom proposal outlines how solar is a renewable energy solution, equipment specifics, the installation process, your unique system layout, and a projected cost including available payment and financing options.

INSTALLATION AGREEMENT

After reviewing and signing the installation agreement, you will schedule a time for our site surveyors to visit your home.

SITE SURVEY

A Blue Raven Solar site surveyor will visit your home and assess for solar readiness.

Once they have sent their evaluation back to our team, our solar designers can begin creating your final design.

APPROVE FINAL DESIGN

Your final design includes the most efficient array layout for your panels and an approved financing path.

PERMIT PACK HOA APPROVAL

To have solar panels installed, specific permits are required whether by the city, county, or state. This can take up to 4-6 weeks to get the proper clearance. If you live in an HOA, permission to install is also needed.

SCHEDULE INSTALLATION

Our installation scheduling team will reach out and find a time that works best for you to complete the installation. Blue Raven Solar will send the materials to your house on the scheduled day.

DAY OF INSTALLATION

The day you selected to have the system installed a Blue Raven Solar installation crew will arrive and complete the process, depending on the size of the system, within 1-2 days. Ideally, the homeowner is present for this step in the process.

FINAL INSPECTION

Once your system passes inspection you can move to energization!

PERMISSION TO OPERATE

Verify your net meter is ready to communicate with your utility company or provider and receive permission to operate your solar power system.

ENERGIZATION INSTRUCTIONS

Now it's time to turn on your solar system and begin saving! We will send instructions via email on how to energize and operate your newly installed system.

WORK ORDER

If additional work is required or a problem arises, Blue Raven Solar will create a work order and resolve any issues.

■ Indicates what steps the customer takes.
