

6 BENEFITS OF GOING SOLAR

1

POSITIVELY IMPACTS THE ENVIRONMENT

One solar panel creates about 50g of CO2 per kilowatt-hour, while coal creates 975g of CO2 per kilowatt-hour, making solar about twenty times cleaner.

6

INCREASE IN PROPERTY VALUE

Rooftop solar panels can boost your property value. It is estimated your property value will go up by \$20 for every \$1 saved on annual utility bills.

2

CONSISTENT ELECTRICITY PRICES

Utility bills continue to rise every year. However, solar panel prices have dropped by about 50% in the last decade, making them the most affordable source of electricity in history.

3

VERSATILE CLIMATE

Solar can work in any climate. In colder states, like Colorado and Minnesota, snow melts quickly and the solar panels are clear from direct and indirect sunlight. In warmer states, like Nevada and Texas, abundant sunlight ensures your solar panels can produce plenty of electricity.

4

FEDERAL TAX CREDIT

While the milestone of one million installed solar systems took approximately 40 years to reach, the next million solar panel systems were installed in only two years. With this rapid growth trend, it is projected that by 2024, the number of solar systems generating energy will surpass four million.

5

SOLAR INDUSTRY IS GROWING

You may qualify for the federal tax credit for your solar panel system, which can help you save. For rooftop systems installed between 2022 and 2032, the tax credit is 30%, with no cap on the credit's value.
